

AD21000 DPF Regen Fluid Universal

Versione del documento: 14 set 2026

Descrizione

MPM AD21000 DPF Regen Fluid Universal is a specially developed regeneration fluid for diesel vehicles equipped with an additive-controlled diesel particulate filter (DPF/FAP). This high-quality fluid supports the regeneration of the diesel particulate filter by lowering the combustion temperature of accumulated soot particles. This supports optimal operation of the emission system and maintains the efficiency of the diesel particulate filter.

The universal formulation has been developed as a replacement for the most common generations of DPF/FAP regeneration fluids used in various European diesel vehicles. The product is suitable for Generation 1, Generation 2, Generation 3 and Generation 4 DPF/FAP regeneration fluids.

Due to its universal applicability, inventory management is simplified and one product can be used for a wide range of vehicles.

Manuale applicativo

Note: After refilling, always check whether the additive system needs to be reset or initialized according to the vehicle manufacturer.

For professional use only. Refer to the technical and safety data sheets for more information.

To be used with the DPF REGEN REFILL KIT Article number: E21DPF-FILLKIT

Unità di imballaggio

ARTE. NO.	VOLUME	ARTICOLI PER UNITÀ	ARTICOLI PER PALLET
AD21001	1 L	12	-
AD21003	3 L	4	-

Analisi standard

TEST	VALORE	METHOD
Densità a 20°C	0.85	kg/l
Colore	Brown / black	
Base	Liquid additive for cars	
Punto di infiammabilità	>62	°C

Le caratteristiche indicate sono specificamente riferite alla produzione attuale e potrebbero subire variazioni.
